Fourth Annual Göttingen Workshop on the History of Modern Mathematics

Mathematisches Institut der Georg-August-Universität Göttingen, July 12–14, 1993

The Fourth Annual Göttingen Workshop on the History of Modern Mathematics will be held at the Mathematisches Institut in Göttingen on July 12–14, 1993. As in past years, the meeting will be organized by the State and University Library of Lower Saxony and Professor David E. Rowe of Mainz University. There will be a general session entitled "Genesis of mathematical ideas and concepts" on all three days of the workshop, in which doctoral students and historians of mathematics are encouraged to present their current research. Parallel to this, three day-long sessions will be devoted to more specific themes in the history of modern mathematics. The preliminary titles of two of these will be "Methodology of the historiography of mathematics" and "Sophus Lie and his impact on the development of mathematics." Those who would like to suggest a topic for the third section or who are interested in organizing the lectures for this section should contact either of the addresses below.

Lectures should have a duration of 30 to 40 minutes and can be given in either English or German. Those interested in contributing a paper, attending the workshop, or obtaining more information should write to:
